

**FS 50 ADD ON
CURTAIN WALL SYSTEM**
When the aluminium mullion and transom profiles are not able to be installed to the wide spacing's required in projects, **ADD ON** system enables steel and wood profiles to be applied for wider transparent areas.

Where you need the curtain wall as one piece, on wide spacing's like airports, auto showrooms etc. steel construction is preferred due to the better carriage capacity, and ADD ON system is used on this kind of projects.

The system, in which the glass combination on standard FS50 system can also be used, is preferred by the designers due to the high inertia level,

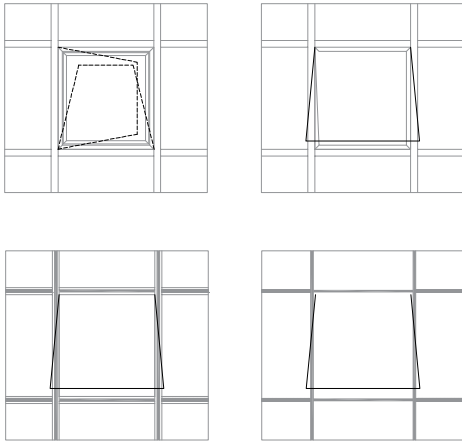

The system comprise of aluminium profiles between 1.8 mm and 2.0 mm wall thickness, and the steel profiles chosen for the facade.

FS 50 ADD ON CURTAIN WALL SYSTEM

TECHNICAL SPECIFICATIONS
System Visible Width: 50 mm
System Depth: Depends on the steel profiles to be used
Glass Thickness: between 6 mm and 52 mm

OPENING TYPES

----- inward opening
————— outward opening
